Preferences for green energy producers

According to the Presidential Decree “On additional measures to reduce the dependence of economic sectors on fuel and energy products by increasing the energy efficiency of the economy and using available resources” No.ПП-4779 dated 10 July, 2020, it was established that from 1 August, the tariff for guaranteed electricity purchase of newly introduced solar, wind, and biogas power plants, micro and small hydroelectric power plants with a capacity of up to 1 MW, is set at the second group of consumers. At the moment, it is UZS 450 for 1 kW per hour, including VAT.

Costs associated with transportation, distribution, and sales are deducted. The norm applies equally to excess electricity produced for their own needs.
