SCADA and EMS systems will be implemented in Uzbekistan

In accordance with the Presidential Resolution No.PP-4699 “On measures for the widespread introduction of the digital economy and e-government” dated April 28, 2020, a project for the implementation of dispatch control and data collection (SCADA) and energy management (EMS) systems are envisaged.

These projects are planned to be implemented in the period 2020 to 2024, and the cost of the investment project is USD 90 million, which will be financed by the World Bank. Also, during the implementation of the project, in particular, using energy-saving technologies in power transmission lines, it is expected to reduce energy losses in the system, operational analysis of emergency situations, and with the help of a modern integrated automated control system - to increase the reliability and quality of power supply.

It is important to mention that the company EDF-CIST (Électricité de France), which was identified through an international tender, will be involved in the development of a technical and economic basis as well as tender documents for the implementation of the SCADA and EMS system in JSC “National Electric Grids of Uzbekistan”.
